# ROOFING & SIDING Accessories

## Many homes don't have the proper ventilation... Why?

- The same number of vents from the last roof are installed or repeating improper venting from a previous roof.
- Improper balance between the intake from the eaves and the outtake on the roof.
- Confusion regarding ventilation needed to properly vent the roof.

## Homeowners are more likely to buy from a contractor who educates the homeowner. Proper ventilation is important because...

- The roof will last longer and be properly covered by manufacturer warranties.
- It lowers cooling costs.
- It reduces risk for mildew and mold.

## More jobs and higher roofing sales come from doing the math!

1. Determine attic square footage:  
Length \_\_\_\_\_ x Width \_\_\_\_\_ = Attic Square Footage \_\_\_\_\_.
2. Determine NFA (Net Free Area) requirements:  
Attic Square Footage \_\_\_\_\_ ÷ 300 = NFA \_\_\_\_\_.
3. Convert square feet NFA to square inches:  
NFA Square Feet \_\_\_\_\_ x 144 = NFA Square Inches \_\_\_\_\_.
4. Split between intake\* (eaves) and outtake (roof):  
NFA Square Inches \_\_\_\_\_ ÷ 2 = NFA Inches Needed \_\_\_\_\_.
5. Calculate number of vents needed:  
NFA Inches Needed \_\_\_\_\_ ÷ Vent NFA \_\_\_\_\_ = # Amount of Vents \_\_\_\_\_.
6. Always round up number of vents to err on the side of caution so that roof material warranty is not voided.

*\*Don't forget to look at the ventilation in the eaves. You may have to make adjustments there as well!*

### 9 x 18 Shake or Half Round Dormer Vent

	Total Attic Sq. Ft.	Number of Vents	NFA Sq. In.
	0-1000	5	250
	1001-1500	7	350
